ERD

Entities and fields:

Cart (Panda Express): the main program /the cart that will contain the order.

User: may be a student or a guest, each user has full name, an ID and a phone number.

Menu: menu contain all the meals for each restaurant and its prices, the user will view the meals through the menu.

Restaurant: the restaurant that will offer the meals for the users, it will be identify by its name.

Coupon: the student will use it to have a discount on the order, each coupon is a code, it is weak entity because it may be or not.

Employee: the admin, the person who will Add/delete coupon, view order information /comment, each employee has a full name, a username and password.

Relationships and Constraints:

Order: the user may order from the menu or may not, the user can order more than one order. The order can be only from one restaurant menu. Each order has a price.

Order_register: between Cart (Panda Express) and menu, the order will be register from one or more menus, the cart will take only one order at a time.

Takes_order: between Cart (Panda Express) and Employee, the employee will take the order from the program (the cart) and may take none or many orders, and the Cart (Panda Express) can hold one order at a time.

Edit: between menu and Employee, each employee may edit only the restaurant's menu that she/he works for and the menu can be edited by one employee more than one time.

Works_for: between Restaurant and Employee, employee can work for only one Restaurant, Restaurant can have at least two employee and up to ten employees.

Has: between Restaurant and menu, Restaurant can have only one menu, menu can relate to only one Restaurant.

Give: between employee and coupon, employee may give a coupon or not, one coupon or more can be given by one or more employees.

Filled data:

User Data:

```
insert into User values (1, 'Student', 'Mie', 'Smth', 333445555);
